Resume

- Computer Science student at the University of Iași, passionate about technology and eager to grow professionally. Experienced in developing personal and academic technical projects.
- Open to technical roles. I thrive in collaborative teams and actively seek opportunities to step out of my comfort zone to learn new technologies.

Education

"Alexandru Ioan Cuza" University of Iași, Faculty of Computer Science Oct 2024 – Present

- Bachelor of Science in Computer Science
- Currently in 3rd year

National College "Emil Racoviță" Iași Sep 2020 – Jul 2024

- Baccalaureate Exam: Grade 10 in Computer Science and Mathematics

Experience

Ness Digital Engineering | Iași, Romania Jun 2026 – Sep 2026

Summer Practice

- **Team Project:** Collaborated within a **5-member team** to develop a secure backend platform for multi-language code execution and compilation. Engineered a scalable architecture with isolated environments and a multi-stage security pipeline to ensure safe concurrent processing. We worked in a SCRUM methodology using Jira for sprints management.
- **Individual Project (Multithreaded Client-Server):** Modeled architecture in UML and built a **Java** TCP server handling concurrent API requests and remote code execution. Created a dual-mode client CLI, automating builds and load testing with **Bash** and **Makefiles**.
- **Individual Project (CLI Calculator & Build Pipeline):** Engineered a command-line app using Git CLI for version control and PRs. Automated the compilation and deployment processes with **Bash** and **Makefiles** on Linux.
- **Technologies & Tools:** GitHub, Jira, Confluence, Docker, Java, C++ Crow framework, React.js, Bash, ClamAV, Makefile, Linux

Projects (available on GitHub)

- **UML and Architecture Designer:** an advanced vector graphics editor built from scratch in Java using JavaFX. Link
- **Secured Vault:** using **Python**, **AES encryption**, secure user management, and **2FA** using QR Codes. The app allows users to register, log in, and manage encrypted files in personalized vaults. It features password strength validation, dynamic UI elements. Link
- **Grid Admin:** a multithreaded Client-Server LAN tool in C using GTK+. Designed a custom **TCP** protocol secured with **AES-256** (OpenSSL) for **SSH remote execution** and **SQLite** persistence, while leveraging **UDP** broadcasts for **Wake-on-LAN** and raw sockets for network discovery. Link
- **Nassi-Shneiderman diagram generator:** a C++ academic project that generates **Nassi-Shneiderman** diagrams based on pseudocode. The app includes multiple files, direct edit, even ads, zoom in/out. Link

Events

- **“FII Practic” (2024 & 2026):** Participated in the **“Journey into Artificial Intelligence”** (implemented ID3, kNN, Naive Bayes, Neural Networks), **“Physical Computing”**, and **“Reverse Engineering in Cybersecurity”** sections.
- **‘FII Practic’ Hackathon (2025):** Developed solutions as part of a 5-member team utilizing Node.js, Prisma, Tailwind CSS, and other technologies.

Certificates

- **Cisco Networking Basics:** Foundational knowledge of networking devices, media, protocols, data flow observation, and practical device configuration. View Certificate
- **Google Cybersecurity Professional Certificate V2:** Covered network security, cryptography basics, threat analysis, ethical hacking fundamentals, SQL, and Python. View Certificate
- **Google IT Automation with Python:** Covered Python, Cloud Services, GitHub, Bash, Version Control, CI/CD, and Containerization. View Certificate
- **Google Data Analytics Professional Certificate:** Spreadsheets, SQL, Tableau, and R. View Certificate
- **Docker for Beginners (KodeKloud):** Learned the basics of Docker with hands-on experience.
- **Oracle Cloud Infrastructure 2025 Certified Foundations Associate:** Core OCI services, security model, governance, and cost management. View Certificate

Skills

Programming Languages

- Intermediate: C/C++, Python, Java, Shell Script (Bash)
- Basic: HTML/CSS, SQL, Assembly

Networking & Cybersecurity

- Computer Networks, TCP/IP Protocols, Network Security, Ethical Hacking Fundamentals, Reverse Engineering, IDS/IPS

Tools & Platforms

- Intermediate: Linux Environments, Git, Docker, Dockerfiles, Makefiles, Jira, Confluence, Scrum
- Basic: CI/CD, Data Analytics

Core Concepts

- Object-Oriented Programming (OOP), Data Structures & Algorithms, Multithreading & Concurrency, Client-Server Architecture, REST APIs, System Design, Operating Systems

Languages

- **English** (C1 level), **Romanian** (Native)
